Three-hour training has been vetted by licensed mental health professionals.

TraumaTALK: Trauma in the Classroom is a two-part, three-hour evidence-based presentation providing an effective trauma-informed training and professional development resource for educators K-12, school administrators, mental health professionals, foster parents, caregivers, and staff with child-oriented agencies. The COVID-19 pandemic and long periods of social isolation may have had traumatic effects on many children, which could present challenges during the school year. This engaging presentation will help educators and other professionals recognize the unique opportunity to identify trauma's effects in the classroom and help children on a path to healing.

This Professional Development Activity is approved by Texas Psychological Association (TPA): Three hours of Professional Development credits available.
